DETAILED ACTION

Election/Restrictions

1. Applicant's election of Group II in the reply filed on August 27, 2004 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

2. Applicant is advised that should claim 8, 10-13, 16 and 18 be found allowable, claims 19-26 will be objected to under 37 CFR 1.75 as being a substantial duplicate thereof. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 8 and 19 are rejected under 35 U.S.C. 102(b) as being anticipated by Tomiyama et al (5714024).

Tomiyama et al discloses a marking material 10 containing a substrate layer 14 which is formed of thermoplastic material (i.e. polyester or polyamide as used by the

Art Unit: 1772

applicant) applied to the exposed rubber surface of a belt. The belt also has tensile members 34. Refer to figures 1 and 4 along with column 3, lines 15-18, column 4, lines 30-44 and column 5, lines 58-64.

5. Claim 8, 9 and 19 are rejected under 35 U.S.C. 102(b) as being anticipated by WO 00/58191 to Lofgren et al.

Lofgren et al teaches a belt containing a rubber layer (i.e. elastomer body) 2, a tensile member 6 and a thermoplastic layer 8 thereon. The thermoplastic layer would be optically distinguishable from the elastomer body due to the fact it is a separate layer and is distinguishable in the figures therefrom. Refer to figures 1 along with page 2, line 25 through page 3, line 33. An additional layer of thermoplastic 9 is also disclosed. This rejection is made to specifically address the second thermoplastic layer in claim 9. The thermoplastic layers would be optically distinguishable from each other due to the fact they are separate layers and are distinguishable in the figures therefrom (or under a microscope).

6. Claims 8, 10, 11, 19-21, 24 and 26 are rejected under 35 U.S.C. 102(b) as being anticipated by Bierbaum (5244080).

Bierbaum teaches a belt containing a rubber layer (i.e. elastomer) 2, a tensile layer 4 and a plastic layer 3 there over. The plastic layer has a pattern of openings (e.g. lettering) that is of a different color than the elastomer body. Plastics are thermoplastic in nature. The examiner has included pages 455 and 586 of Grant and Hack's Chemical Dictionary to show the definitions of plastic as being moldable by heat (i.e.

Art Unit: 1772

thermoplastic). Refer to figures 1 and column 2, lines 7-49, column 3, lines 41-67 and column 4, lines 17-61.

Claim Rejections - 35 USC § 103

- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 8. Claims 12, 13, 16, 18, 22, 23 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bierbaum in view of WO 00/58191 to Lofgren et al.

The primary reference teaches the invention substantially as recited except for the specific materials used for the elastomers and thermoplastic materials. Bierbaum does generically teach that elastomers and plastics are used. See 35 USC 102 rejection above.

Lofgren et al teaches the specific thermoplastic (i.e. polyethylene) and rubbers (SBR, EPDM) are used in the formation of belt bodies and layers applied thereto. Refer to page 2, lines 30-32 and page 3, lines 22-27.

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to Bierbaum to use the specific materials, as taught by Lofgren et al, to form the body and layer thereon motivated by the fact that Bierbaum teaches that rubbers and plastics are generically used for these sections of the belt. Lofgren et al also discloses it is know for drive belts to contain teeth which provide enhanced gripping of the belt.

Allowable Subject Matter

9. Claim14, 15 and 17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

10. The following is a statement of reasons for the indication of allowable subject matter: Claim 14 is deemed allowable over the prior art since the prior art fails to teach a second thermoplastic layer containing openings on the first thermoplastic layer.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Donald Loney whose telephone number is (571) 272-1493. The examiner can normally be reached on Mon, Tues, Thurs and Fri. 8AM-4PM, flex schedule.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Harold Pyon can be reached on 571 272-1498. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
